

## Introduction to Computer Graphics

**Geometry Objects** 

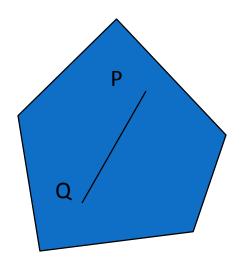

葉奕成 I-Cheng (Garrett) Yeh

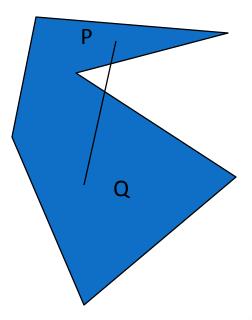

#### **Basic Elements**

- Geometry is the study of the relationships among objects in an *n*-dimensional space
  - In computer graphics, we are interested in objects that exist in three dimensions
- Want a minimum set of primitives from which we can build more sophisticated objects
- We will need three basic elements
  - Scalars
  - Vectors
  - Points

#### Convexity

 An object is convex iff for any two points in the object all points on the line segment between these points are also in the object

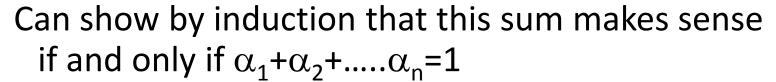

#### **Affine Sums**

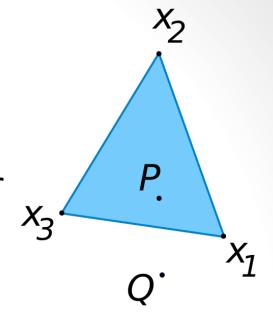

- A convex combination is a linear combination of points
- Consider the "sum"

$$P = \alpha_1 P_1 + \alpha_2 P_2 + \dots + \alpha_n P_n$$

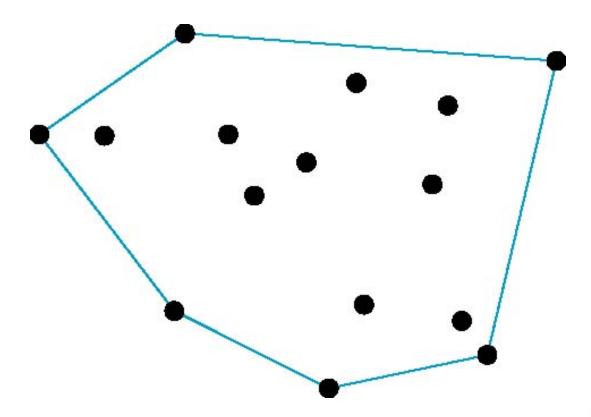

in which case we have the *affine sum* of the points  $P_1,P_2,\ldots,P_n$ 

• If, in addition,  $\alpha_i >= 0$ , we have the *convex hull* of  $P_1, P_2, \dots P_n$ 

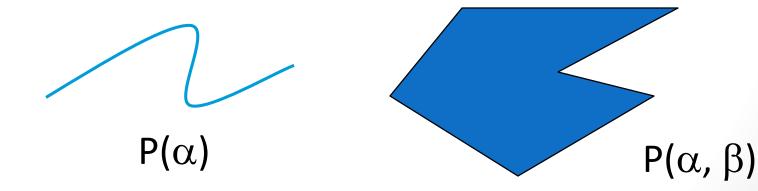

#### Convex Hull

- Smallest convex object containing  $P_1, P_2, \dots, P_n$
- Formed by "shrink wrapping" points

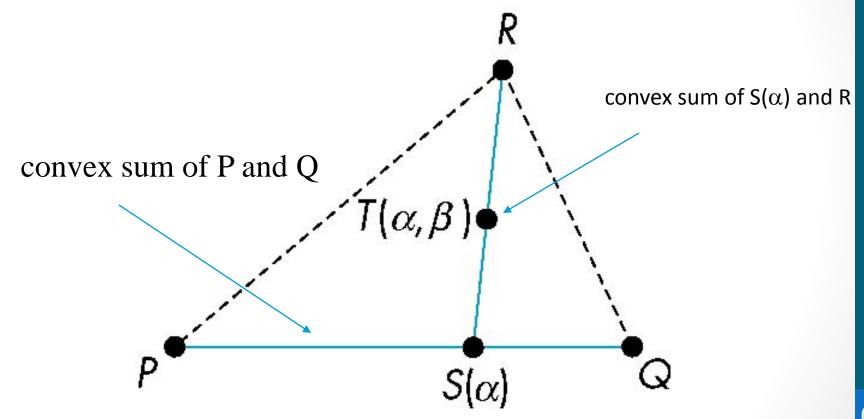

#### **Curves and Surfaces**

- Curves are one parameter entities of the form  $P(\alpha)$  where the function is nonlinear
- Surfaces are formed from two-parameter functions  $P(\alpha, \beta)$ 
  - Linear functions give planes and polygons

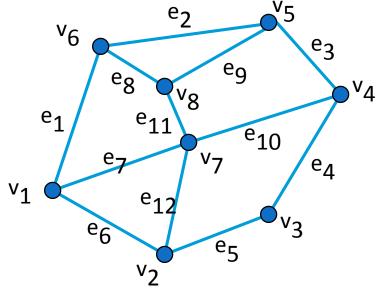

#### Triangles

for  $0 <= \alpha, \beta <= 1$ , we get all points in triangle

#### Representing a Mesh

Consider a mesh

- There are 8 nodes and 12 edges
  - 5 interior polygons
  - 6 interior (shared) edges
- Each vertex has a location  $v_i = (x_i \ y_i \ z_i)$

#### Simple Representation

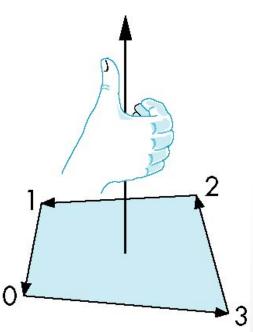

- List all polygons by their geometric locations
- Leads to OpenGL code such as

```
glBegin(GL_POLYGON);
    glVertex3f(x1, y1, z1);
    glVertex3f(x6, y6, z6);
    glVertex3f(x7, y7, z7);
glEnd();
```

- Inefficient and unstructured
  - Consider moving a vertex to a new locations, the connectivity of this mesh may been broken.

## Inward and Outward Facing Polygons

- The order  $\{v_1, v_2, v_7\}$  and  $\{v_2, v_7, v_1\}$  are equivalent in that the same polygon will be rendered by OpenGL but the order  $\{v_1, v_7, v_2\}$  is different
- The first two describe outwardly facing polygons
- Use the right-hand rule =
  counter-clockwise encirclement
  of outward-pointing normal
- OpenGL treats inward and outward facing polygons differently

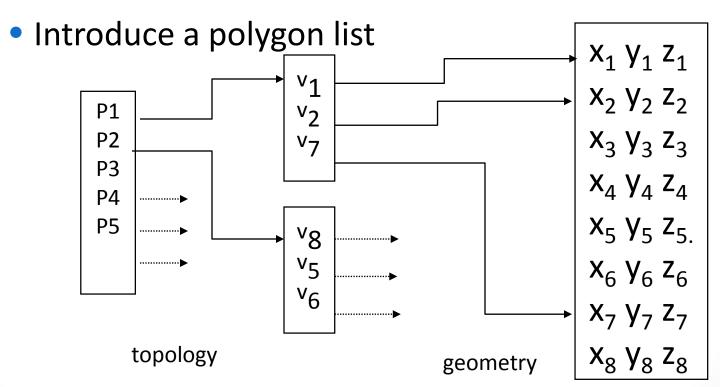

#### Geometry vs Topology

- Generally it is a good idea to look for data structures that separate the geometry from the topology
  - Geometry: locations of the vertices
  - Topology: organization of the vertices and edges
  - Example: a polygon is an ordered list of vertices with an edge connecting successive pairs of vertices and the last to the first
  - Topology holds even if geometry changes

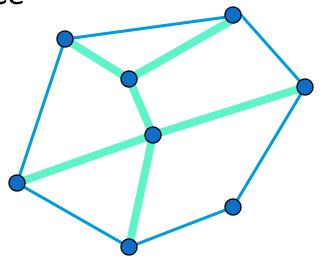

#### Vertex Lists

- Put the geometry in an array
- Use pointers from the vertices into this array

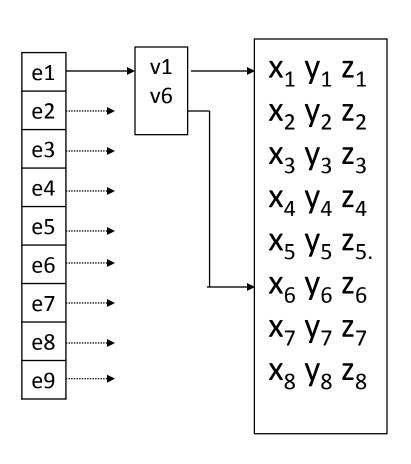

#### Shared Edges

 Vertex lists will draw filled polygons correctly but if we draw the polygon by its edges, shared edges are drawn twice

Can store mesh by edge list

#### Edge List

Note polygons are not represented

#### Modeling a Cube

- Model a color cube for rotating cube program
- Define global arrays for vertices and colors

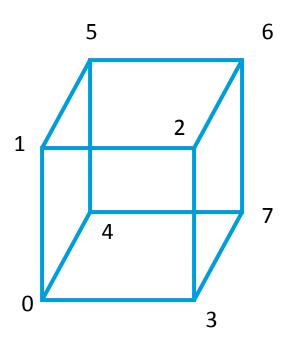

```
GLfloat vertices[][3] = {\{-1.0,-1.0,-1.0\},\{1.0,-1.0,-1.0\},\{1.0,1.0,-1.0\},\{-1.0,1.0,-1.0\},\{1.0,-1.0,1.0\},\{1.0,-1.0,1.0\},\{1.0,-1.0,1.0\},\{1.0,-1.0,1.0\},\{1.0,1.0,0.0,0.0\},\{1.0,0.0,0.0\},\{1.0,1.0,0.0\},\{1.0,1.0,0.0\},\{1.0,1.0,0.0\},\{1.0,0.0,0.0\},\{1.0,0.0,0.0\},\{1.0,0.0,0.0\},\{1.0,0.0,0.0\},\{1.0,0.0,0.0\},\{1.0,0.0,0.0\},\{1.0,0.0,0.0\},\{1.0,0.0,0.0\},\{1.0,0.0,0.0\},\{1.0,0.0,0.0\},\{1.0,0.0,0.0\},\{1.0,0.0,0.0\},\{1.0,0.0,0.0\},\{1.0,0.0,0.0\},\{1.0,0.0,0.0\},\{1.0,0.0,0.0\},\{1.0,0.0,0.0\},\{1.0,0.0,0.0\},\{1.0,0.0,0.0\},\{1.0,0.0,0.0\},\{1.0,0.0,0.0\},\{1.0,0.0,0.0\},\{1.0,0.0,0.0\},\{1.0,0.0,0.0\},\{1.0,0.0,0.0\},\{1.0,0.0,0.0\},\{1.0,0.0,0.0\},\{1.0,0.0,0.0\},\{1.0,0.0,0.0\},\{1.0,0.0,0.0\},\{1.0,0.0,0.0\},\{1.0,0.0,0.0\},\{1.0,0.0,0.0\},\{1.0,0.0,0.0\},\{1.0,0.0,0.0\},\{1.0,0.0,0.0\},\{1.0,0.0,0.0\},\{1.0,0.0,0.0\},\{1.0,0.0,0.0\},\{1.0,0.0,0.0\},\{1.0,0.0,0.0\},\{1.0,0.0,0.0\},\{1.0,0.0,0.0\},\{1.0,0.0,0.0\},\{1.0,0.0,0.0\},\{1.0,0.0,0.0\},\{1.0,0.0,0.0\},\{1.0,0.0,0.0\},\{1.0,0.0,0.0\},\{1.0,0.0,0.0\},\{1.0,0.0,0.0\},\{1.0,0.0,0.0\},\{1.0,0.0\},\{1.0,0.0\},\{1.0,0.0\},\{1.0,0.0\},\{1.0,0.0\},\{1.0,0.0\},\{1.0,0.0\},\{1.0,0.0\},\{1.0,0.0\},\{1.0,0.0\},\{1.0,0.0\},\{1.0,0.0\},\{1.0,0.0\},\{1.0,0.0\},\{1.0,0.0\},\{1.0,0.0\},\{1.0,0.0\},\{1.0,0.0\},\{1.0,0.0\},\{1.0,0.0\},\{1.0,0.0\},\{1.0,0.0\},\{1.0,0.0\},\{1.0,0.0\},\{1.0,0.0\},\{1.0,0.0\},\{1.0,0.0\},\{1.0,0.0\},\{1.0,0.0\},\{1.0,0.0\},\{1.0,0.0\},\{1.0,0.0\},\{1.0,0.0\},\{1.0,0.0\},\{1.0,0.0\},\{1.0,0.0\},\{1.0,0.0\},\{1.0,0.0\},\{1.0,0.0\},\{1.0,0.0\},\{1.0,0.0\},\{1.0,0.0\},\{1.0,0.0\},\{1.0,0.0\},\{1.0,0.0\},\{1.0,0.0\},\{1.0,0.0\},\{1.0,0.0\},\{1.0,0.0\},\{1.0,0.0\},\{1.0,0.0\},\{1.0,0.0\},\{1.0,0.0\},\{1.0,0.0\},\{1.0,0.0\},\{1.0,0.0\},\{1.0,0.0\},\{1.0,0.0\},\{1.0,0.0\},\{1.0,0.0\},\{1.0,0.0\},\{1.0,0.0\},\{1.0,0.0\},\{1.0,0.0\},\{1.0,0.0\},\{1.0,0.0\},\{1.0,0.0\},\{1.0,0.0\},\{1.0,0.0\},\{1.0,0.0\},\{1.0,0.0\},\{1.0,0.0\},\{1.0,0.0\},\{1.0,0.0\},\{1.0,0.0\},\{1.0,0.0\},\{1.0,0.0\},\{1.0,0.0\},\{1.0,0.0\},\{1.0,0.0\},\{1.0
```

### Drawing a Polygon from a List of Indices

Draw a quadrilateral from a list of indices into the array vertices and use color corresponding to first index void polygon(int a, int b, int c, int d) glBegin(GL\_POLYGON); glColor3fv(colors[a]); glVertex3fv(vertices[a]); glVertex3fv(vertices[b]); glVertex3fv(vertices[c]); glVertex3fv(vertices[d]); glEnd();

#### **Draw Cube from Faces**

```
void colorcube()
{
    polygon(0,3,2,1);
    polygon(2,3,7,6);
    polygon(0,4,7,3);
    polygon(1,2,6,5);
    polygon(4,5,6,7);
    polygon(0,1,5,4);
}
```

Note that vertices are ordered so that we obtain correct outward facing normals

#### Efficiency

- The weakness of our approach is that we are building the model in the application and must do many function calls to draw the cube
- Drawing a cube by its faces in the most straight forward way requires
  - 6 x glBegin, 6 x glEnd
  - 6 x glColor
  - 24 x glVertex
  - More if we use texture (texcoord) and lighting (normal)

#### Vertex Arrays

- OpenGL provides a facility called vertex arrays that allow us to store array data in the implementation
- Six types of arrays supported
  - Vertices
  - Colors
  - Color indices
  - Normals
  - Texture coordinates
  - Edge flags
- We will need only colors and vertices

#### Initialization

Using the same color and vertex data, first we enable

```
glEnableClientState(GL_COLOR_ARRAY);
glEnableClientState(GL_VERTEX_ARRAY);
```

Identify location of arrays

```
glVertexPointer(3, GL_FLOAT, 0, vertices);

offset b/w each vertex

stored as floats

data array points
```

```
glColorPointer(3, GL_FLOAT, 0, colors);
```

#### Mapping Indices to Faces

Form an array of face indices

```
GLubyte cubeIndices[24] = \{0,3,2,1,2,3,7,6,0,4,7,3,1,2,6,5,4,5,6,7,0,1,5,4\};
```

- Each successive four indices describe a face of the cube
- Draw through glDrawElements which replaces all glVertex and glColor calls in the display callback

#### Drawing the Cube

Method 1: what to draw

number of indices

format of index data

start of index data

• Method 2:

```
glDrawElements(GL_QUADS, 24,
    GL_UNSIGNED_BYTE, cubeIndices);
```

Draws cube with 1 function call!!

# SUGGESTION! OR OBJECTION?

Let's stop here,
